

Learn 'n Grow Class at SummerWinds Nursery:

Oh Deer – Bad Squirrel

Lost your love for Bambi? – Feeling Squirrely?

The Bay Area is undergoing a construction boom from San Francisco to the South Bay. The deer, rabbits, squirrels, chip monks, opossums, raccoons, mice, gophers, moles and of course rats have been evicted. They are looking to move into your neighborhood.

You may already know they love your garden vegetables, your fruit trees, and berry bushes. They will attack from the trees, across the landscape, and underground.

We offer safe and humane solutions:

1. We will help you with deer resistant plants that thrive in our Bay area microclimates.
2. Learn how to use gopher, mole and vole cages when you plant your fruit trees.
3. Learn how to apply non-toxic organic methods to prevent rodents, and other vermin from damaging your vegetable gardens.

We respect our environment – it's our goal for you to enjoy your edible gardens as pest free as possible, without hiring a back woods trapper.

Products shared/demonstrated:

- Gopher – Mole – Vole cages
- Liquid and powder deterrents
- Smoke methods
- Electronic signal methods
- Deer resistant plant list
